

- + Select model: best for the task (GP)
  - + Experiments: optimal for the system & selected model  $\Rightarrow$  OED
  - + Learn & Control: efficient computation.
  - + Dashed box!: not a part of the GP framework, but from the practical impl. point of view, it's important for the designers/operators to intuitively & interactively perform and assess the steps, to perform simulations to assess the control performance. The tooling a user interface is an important component of the overall framework
- [ This is where we motivate for the dashboard, ICONICS, ... ]
